Title: Perfect score:

US-09-843-250-33
2408
1 MNYNNKILVSESGLSQKHLI.....AEFEHASSTWHTELTKTTDR 449

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt_40:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Aromatic hydrocarbons catabolism; Oxidoreductase; Iron-sulfur; Iron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Structure of an aromatic-ring-hydroxylating dioxygenase-naphthalene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SPECIES-P.putida; STRAIN-ATCC 17484;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CATALYTIC ACTIVITY: Naphthalene + NADH + O(2) = (1R,2S)-1, dihydronaphthalene-1,2-diol + NAD(+).

COEACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM. PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF DIBENZOTHIOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTH-1-HYDROXY-2-NAPTHOIC ACID AND THE METABOLISM OF DBT IS LIVOXIDATION OF THE AROMATIC RING.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF FERREDOXIN (RUDCH) AND FERREDOXIN (RUDCH), AND ISP ISS COMPOSED OF AN HEXAMER OF THREE LARGE ALPHA SUBUNITS (NDOB) AND THREE SMALL BETA SUBUNITS (NDOC).

SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: COMPONENT OF NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME SYSTEM WHICH CATALYZES THE INCORPORATION BOTH ATOMS OF MOLECULAR OXYGEN INTO NAPHTHALENE TO FORM CISNAPHTHALENE DIHYDRODIOL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            JS0071; JS0071.

COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES

CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF

DIBENZOTHIOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTHREN

1-HYDROXY-2-NAPTHOIC AND THE METABOLISM OF DBT IS LIMITE

OXIDATION OF THE AROMATIC RING.

SUBUNIT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME

SUBUNIT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF EERREDOXIN (RUDCA), AND ISP IS OF EERREDOXIN (RUDCA), AND ISP IS COMPOSED OF A LARGE ALPHA SUBUNIT (NDOB) AND A SMALL BETA SUBUNIT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BOTH ATOMS OF PROFESSION.

NAPHTHALENE DIHYDRODIOL.

1- CATALYTIC ACTIVITY: Naphthalene + NADH + O(2) = (1R,2S)-1,2-
dihydronaphthalene-1,2-diol + NAD(+).

1- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

1- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

1- PATHAY: UPDER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES
CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF
DIBENZOTHIOPHENE (DET) AND PHENANTHRENE. CONVERTS PHENANTHRENE TO
1-HYDROXY-2-NAPTHOIC ACID AND THE METABOLISM OF DET IS LIMITED TO
OXLDATION OF THE AROMATIC RING.

1- SUBUNIT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT AND AN IRON
SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED
OF FERREDOXIN REDUCTASE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS

COMPOSED OF A LARGE ALPHA SUBUNIT (NDOB) AND A SMALL BETA SUBUNIT
                                                                                                                                                                                                        Pfam; PF00355; Rieske; 1.
Pfam; PF00848; Ring_hydroxyl_A; 1.
PRINTS; PR00090; RNGDIOXGNASE.

"Nucleotide sequencing and characterization of the genes encoding benzene oxidation enzymes of Pseudomonas putida.";
J. Bacteriol. 169:5174-5179(1987).
-i. CATALYTIC ACTIVITY: Benzene + NADH + O(2) = cis-1,2-idhydrobenzene-1,2-diol + NAD(+).
-i. COPACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.
-i. PACHMAY: FIRST STEP OF DEGRADATION OF BENZENE TO CATECHOL.
-i. SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF FOUR PROTEINS:
TWO SUBUNITS OF THE HYDROXYLASE COMPONENT (BUZA AND BNZB), A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-AUG-1988

CATALYTIC ACTIVITY: Choline + 2 reduced ferredoxin + O(2) betaine aldehyde + 2 oxidized ferredoxin + H(2)O.

COTACOR: Magnesium. Probably binds a 2Fe-2S group and an atom (By similarity).

PATHWAY: Osmoregulatory choline-glycine betaine pathway.

SUBCELULIAR LOCATION: Chloroplast stroma (By similarity).

SUBCELULIAR LOCATION: Chloroplast stress.

INDUCTION: By salt, drought and heat stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AMATR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Meng Y.L., Wang Y.M., Zhang B., Nii N.;
"Isolation of a Choline monooxygenase cDNA clone from Amaranthus tricolor and its expressions under stress conditions.";
Cell Res. 11:187-193(2001).
